# Industry 4.0?
No, Industry 5.0

Different startup story

I'm not an ordinary developer, who want to work from task to task. Over the past 7 years, I have focused on **product development**, gathering user and market requirements, and bringing the most efficient and innovative solutions with **more than 20 big companies.**

Our long-term motivation as a Pulsar team extends beyond profit. We aim to create a legacy of change, transforming how businesses operate and adapt.

Through AI solutions, we seek to empower companies of all sizes to compete in an increasingly complex marketplace, offering them the tools to **innovate** continually.
